A Different Background On Every Page!

Have you ever wanted every page on your site to be unique? Well now it's possible! Simply by using the built-in Joomla menu image you can assign that image as the background of the page! Use a default image that is set to all pages and then apply a unique background image to any page you wish.

Please note this feature can only be used with the S5 No-MooMenu and S5 Suckerfish menu.

Example: Compare the background of this current page to the background on the homepage and you will see that this page has a red hue to it.

Default Background Image:

The default background image (located in the template configuration area) is the image that will be used if no menu image is assigned to a page. If you
would like to have a unique background on a page simply apply a menu image to
that page.

Creating a background image:

Try to keep your image size between 50k and 120k; using an 8 bit png or low quality jpg will help.

How do I set the background color? You can set the background color to any
web-color you would like through the template configuration!

How do I get my images on the menu?

Step 1.

Upload your images to the "images/stories" image folder via ftp.

Step 2.

Then assign them to your menu items under the Joomla menu item adminstration.
Just click on the menu item and you will see this below. In Joomla 1.5 this
option is under "Parameters - System"

I like what I see! I want to JOIN TODAY.
