Game Crusade is fully transparent and will allow you to fade up to six background images of your choice. This is easily done through the template configuration section. You pick how many images you want to fade and how often you want them to transition. If you don't want this fancy feature that's no problem at all just set the amount of images to one and this feature will automatically be disabled. In addition to a fading background feature you can also choose a fixed or fluid background. Fixed will allow your main body to scroll separate from the background image and fluid will cause the background to scroll with the main body. Please note all customers are responsible for researching copyright information of any image.
