

Basics contains only 30kb of images in it's core!

Imagine a template that is professionally designed and only contains 30kb of images in its core without loosing its design appeal! And on top of that you pick just one color to change the look and feel of the entire template! We are proud to introduce to you Basics, a light weight template with lots of design. Give your site's viewers a great look, that's fast loading without all of the bloat that many other Joomla templates have.

SEO - Get your site noticed!

Not only is this template lightning fast but it is great for search engine optimization as well! What is SEO? It is simple the act of altering a web site so that it does well in the organic, crawler-based listings of search engines such as google.com. How does Basics accomplish this? It's simple, the majority of your most valuable content is found in the main body of your site, because Basics allow you to disable not only the left column but all module positions this allows for your content to be found first by search engines before it reaches your other content. This is a common feature this can be done with almost all of Shape 5 templates as well.
