

S5 Tab Show

Written by Administrator

Friday, 15 January 2010 20:47 - Last Updated Friday, 15 January 2010 20:54

The S5 Tab Show module can be demo'd on the homepage. This version of the module is customized specifically for Clarity and cannot be used with any other templates. We do have another version that can be used on any Joomla template.

The S5 Tab Show has now been converted to a module that can be used in any module position and in any template! It includes up to module positions and 3 display effects just like the S5 Frontpage Slide module. It holds up to **10** actual module positions so you can publish any of your favorite modules to one of the slides and keep your site clean and consolidated while giving it some eye candy. The following is a quick list of features that are included with the module:

- Choose Mootools slide in or S5 Effects snap in or fade in effects (Choose S5 Effects to guarantee no script conflicts)
- Set button backgrounds and hovers
- Holds up to 10 module positions
- Specify the width of the module
- XHTML Valid

The following is a screenshot of what the admin side of the module looks like:

Module Class Suffix	<input type="text"/>
Width	<input type="text" value="310"/>
Height	<input type="text" value="230px"/>
Height of Buttons	<input type="text" value="27px"/>
Line-height of Buttons	<input type="text" value="2.2em"/>
Color used for button background	<input type="text" value="transparent"/>
Image used for button background	<input type="text" value="modules/s5_tabshow/s5"/>
Color that shows on button hover	<input type="text" value="#FFFFFF"/>
Image that shows on button hover	<input type="text" value="modules/s5_tabshow/s5"/>
Color of Button Text	<input type="text" value="#000000"/>
Choose your javascript library	<input type="text" value="Mootools.Javascript"/> <input type="button" value="x"/>
Mootools Animation	
Choose your button activation method	<input type="text" value="Mouse Over"/> <input type="button" value="x"/>
S5 Effects Animation	
Choose your animation effect	<input type="text" value="Fade In"/> <input type="button" value="x"/>

Joomla 1.5 new module positions setup. Here's how you do it:

- Open up the XML file included with the template you are using
- Locate the area
- Start adding new positions s5_tab1 s5_tab2, etc all the way up to s5_tab10.
- Click the save button in the upper right hand corner and you're done!

I like what I see! I want to [JOIN TODAY](#)
