Clarity is a generic style template that can be used for any type of site, business, ecommerce, etc. The release of Clarity brings the introduction of images in the S5 menu and dynamic module positions. We also have included the NEW S5 Image Slider. Great for displaying your products that you have available on a eCommerce or even non eCommerce site as Clarity. We also have included the S5 Box, edited S5 News Display and an edited S5 Tab show. As you can see throughout the demo module positions are wrapped in contains with handles that you can grab and move around. You simply click and drag to a new position and your setting is saved to a cookie so upon page refresh your settings changes remain.
