

Two Logo Options

This month we've given you the option of creating a more a static logo or using a module position to create a logo. The demo shows a static version.

To create a static logo:

- When Magnum Opus is first install the header will be blank with no logo.
- The first thing you need to do is decide on a preset color style or a custom style.
- When you've decided on a color style download the file `s5_magnum_opus_header_logo.psd` from the download section. This file contains all the preset header styles and logo.
- Edit the file as you wish and when you are ready to save it go to file/save for web and save the file as an 8-bit png (use 24-bit only i necessary to save on size). The file must be saved as `s5_header_style1.png` replace style1 with whatever color you are using. If you are creating a custom color theme save the file as `s5_header_custom.png`.
- Upload the file to `templates/magnumopus/images` and you're done!

To use a module position logo:

- When Magnum Opus is first install the header will be blank with no logo.
- The first thing you need to do is decide on a preset color style or a custom style.
- If you are creating a custom color theme proceed with this step - download the file `s5_magnum_opus_header_logo.psd` from the download section. This file contains all the preset header styles and logo. Edit the file as you wish and when you are ready to save it go to file/save for web and save the file as an 8-bit png (use 24-bit only i necessary to save on size). The file must be saved as `s5_header_custom.png`. Upload the file to `templates/magnumopus/images`
- Publish whatever logo module you would like to the 'header' position and you're done!
