

NEW! - S5 Tab Show

The S5 Tab Show is a great way to organize your site's content with a clean and professional display!

With the ability to use up to 20 tabs you will never run out of tabs again and each page can have its own unique tabs!

Here's how it works - The S5 Tab Show uses 20 module positions: s5_tab1, s5_tab2, s5_tab3, etc. Simply publish your module to anyone of these module positions (you may publish to the same position more than once for multiple modules in one tab). In the module manager assign what page you want that module to show on. If the module is set to show on a certain page it's tab will also show on that page.

An example of this can be seen on our demo. The modules on the homepage are assigned to positions: s5_tab1 - 5 and are assigned to the homepage only. The modules on this page are assigned to positions: s5_tab6 - 9 and are assigned to this page only; making two unique sets of tabs on two different pages.

There are two configurations you need to make in the template configuration as well. You will see both of these settings towards the bottom of the template configuration:

Unlike all other template clubs who assign these types of tab systems to a static non-moving position we have decided to let you choose where to place it! You can pick from up to 6 locations to place the S5 Tab Show! Finally you will need to assign titles to each of the tabs. You will see a section at the very bottom where you can name each of the 20 tabs.

Joomla 1.0 requires you to setup 20 new module positions, but it's easy and only takes seconds. Here's how you do it:

- Login to the backend of Joomla.
- Navigate through the menu system to Site/Template Manager/Module Positions
- Starting at the first blank position field enter s5_tab1 as a name.
- Continue adding s5_tab2, s5_tab3 in the next fields up to s5_tab20
- Click the save button in the upper right hand corner and you're done!

- I like what I see! I want to join today.
