

Joomanager not included in Site Shapers

The Joomanager component does not come included in the Shape 5 site shapers. It must be downloaded and installed separately from Joomanager.com

When joining Joomanager.com you will have access to a quick install of Portfolio which is the same as a site shaper that will include Joomanager.com and all the demo data.

What are site shapers? [click here](#)

What is Joomanager?

By the simplest definition, Joomanager is a Joomla 1.5 native only component that gives your site the ability to list multiple items in multiple categories in a directory layout. Items you could list could be for a portfolio, items for sale, etc.

Joomanager allows for the creation of custom fields so you can have an unlimited number of attributes associated with a particular item. These attributes are defined in the administration area of the component and can be geared towards any type of site to make it your own; for example a site that sells/lists: cars, boats, motorcycles, houses and whatever else you can think of.
