On this page you will see all the module styles and module positions available plus how to setup each of them.

All modules are fully collapsible!

How to install and setup module styles:

1. Download any module you wish to publish to your site.
2. In the backend of Joomla navigate to the menu item Extensions/Install Uninstall

3. Browse for the module's install file and click Upload File & Install.
4. Once the module has been installed navigate to the menu item Extensions/Module Manager (same menu as above)
5. Find the Module just installed and click on its title.
6. Change any parameters that you wish and be sure to set it to published and publish it to your desired module position.
7. To apply a module style simply fill in the module class suffix field with any of this template's included module styles. This parameter setting is found under Module Parameters on the right side of the screen.

8. Assign what pages you would like the module to appear on and finally click Save.

The screenshot shows a Joomla! administration interface. At the top, there's a 'Menus:' section with three radio buttons: 'All', 'None', and 'Select Menu Item(s) from th'. Below this is a 'Menu Selections:' section. It contains two scrollable lists. The first list, titled 'Bottom Menu', includes items like 'Home', 'Contact Us', 'FAQs', 'About Us', 'Community', 'News', and a 'Help and Support' section with sub-items like 'Need Help Finding Something?', 'Contact Customer Service', 'Forgot Your Password?', 'Send Us Your Feedback', and 'Explore Our Website'. The second list, titled 'mainmenu', currently shows 'Home' selected. The interface is in a light gray theme.
