

Responsive Themes Are Here For Wordpress

Our powerful responsive Vertex framework has now found a permanent home with our Vertex powered Wordpress themes! All of our future released Wordpress themes will now be built off of our Vertex responsive layout and features! We believe we have come up with the best possible responsive layout, with the most flexibility and ease of use possible! Below is a list of some the great features we offer in our themes:

- The responsive layout is completely optional, don't use it if you don't want it!
- Virtually no javascript. The only javascript used is for the mobile bar effects and to add responsive capabilities to IE7. We believe that javascript should only be used as a last resort.
- Start with a fixed or fluid layout.
- Optional IE7/8 responsive layout.
- Very easy to understand layout, which allows you to setup your site with very little effort.
- Fully customizable mobile bar styling.
- Hide divs, modules and content easily with hide classes at specified screen sizes.
- Wide screen support options.
- Multiple options for fluid width images.
- And much more!

Be sure to check out our latest theme demo to learn more about these amazing features.
