

S5 Accordion Menu 2.1 Has Been Released

Today, we have launched a new 2.1 version of our very popular accordion menu module. This version fixes several bugs that were occurring when setting links to open in a new windows. In addition to that we have also added a new feature that allows you to have the accordions automatically open for the active accordion, or remain closed on each page load. This was a very highly requested feature by our members, so we hope you like it! The new version is ready for immediate downloads in the Club Extensions download area.
