

S5 Quick Contact and S5 Tell a Friend Have Been Updated

Our very popular S5 Quick Contact and S5 Tell A Friend module has been updated to new versions to include some highly requested features:

1. The spam protection for both of these modules has been greatly improved. They both now include their own native captcha options, which replace the older spam methods of the module.
2. Mail functions are now sent via the default Joomla mail functions and not the module's own php mail() calls. This means the modules will send mail based on the settings in the Joomla global configuration for better mail delivery.

We hope you enjoy these updates, and remember these are free modules so enjoy!
