Joomla 3.3.0 Stable Is Released

Joomla 3.3.0 stable was released yesterday. We have tested several of our Vertex templates, and as we predicted earlier this month, we have not run into any issues.

Before you upgrade:

1. Make sure you are running Vertex 3.5. You can check this from the About tab in Vertex.

2. Make sure your server is running at least php 5.3.10, as this is a new security requirement of Joomla.

You can read more about the upgrade from here:
