

Joomla Site Shapers Updated To 3.5

Over the last few weeks we have been working hard at updating all of our responsive site shapers to the newest Joomla 3.5.1, and we are happy to announce that this project is now complete! So now all brand new installations will be running the latest software updates right from the start. Of course, anyone already running Joomla can update Joomla at any time as well directly form the backend of Joomla. Joomla 3.5 brings a lot of great new features and harnesses the power and speed of php7! If you haven't tried out Joomla 3.5 yet, our Joomla 3 products are fully compatible with this latest version and we suggest upgrading today to receive all the latest upgrades and security updates.
