Thursday, 14 January 2010 08:03 - Last Updated Tuesday, 14 September 2010 19:28

The S5 Image and Content Fader v2.5 is a small update to v2 this module now gives you the ability to hide the navigation arrows, the thumbnail carousel and the text that pops up at the bottom of the module. The delay time can also be set via the module admin. We also included a switch to choose between mootools v1.1 or 1.24

The module still allows you publish your own content into each slide transition and for multiple slide transition effects, navigation arrows and also a drop down gallery tab that allows you to select a slide via a thumbnail. The S5 Image and Content Fader v2.5 is powered by Mootools by default but still includes the S5 Effects library and allows you to use it in a "legacy module" if you are experiencing script conflicts. Best of all it's free!

NOTE: Legacy mode will display all your images, titles and slide text but includes limited functionality thus it does not include navigation arrows or the new drop down gallery tab.

Features at a glance:

- NEW horizontal sliding transition
- Choose between 4 slide transitions: Fade, Continuous Horizontal, Fade Slide Left, Continuous Vertical
- Specify height and width of module
- Includes a gallery tab drop down to show all images
- Each image slide can have its own hyperlink
- Show up to 10 images at once
- Publish your own content to each picture slide
- Navigation arrows
- Not all slides require titles
- Change delay time
- Hide or show: Navigation arrows, thumbnail carousel and popup text

Admin side of the module:
