---

The S5 Reservation module allows you to take reservation inquiries on your site. You can setup articles for different packages or items you have available for your industry and then the module will pull from any article category that you define in the backend and show in the drop down of the module. The module is setup and functions like an accordion so that less real estate is taken up on your site. The module also has several input fields that are required for the user to fill out in order to submit and if they aren't filled in they will be prompted and forced to enter before submission. The module uses a sleek AJAX captcha that shows at the end before you submit the inquiry, it simply pops up and once you verify by entering the 6 digits you can then send the inquiry.

### Features:

- Powered by Joomla included core Mootools
- Error checking on all fields besides extra information
- Includes language file to support multi lingual sites
- Calendar popups for the check in check out fields
- Captcha included on form submit, powered by AJAX to confirm correct input
- Choose any Joomla category to pull articles from
- Hide read more in the drop down for articles
- Enter the send to email address in the admin of the module

The screenshot shows the S5 Reservations form. It has a blue header with the text 'S5 Reservations'. Below the header are several input fields: 'Choose your package:' (text input), 'Choose your package:' (dropdown menu), 'Your information:' (text input), 'Accommodations:' (text input), 'Check in/Check out:' (text input), and 'Extra information:' (text input). At the bottom of the form are two buttons: 'Reset' and 'Check Availability'.

### Screenshot of the admin area of the module:

The screenshot shows the Joomla! Module Parameters configuration screen for the S5 Reservations module. The 'Module Parameters' section is expanded, showing the following settings: 'Module Class Suffix' is 'sbagray'; 'Category' is 'News/Newsflash'; 'Show Images' is set to 'Yes' (radio button selected); 'Linked Titles' is 'Use Global'; 'Read More' is set to 'Show' (radio button selected); 'Article Title' is 'Yes' (dropdown menu); 'No. of Items' is an empty text input field; and 'Send to Email' is an empty text input field.

The module will pull from any Joomla article category that you specify. In the article you can add images as we have done in the below screenshot:

If you leave any of the fields blank besides the extra information text box you will be prompted as the following image shows before you can submit the form:

The user can enter a date from the popups that appear once you click in the text boxes:

The captcha popup shows once you have filled out all other required fields on the module. As you can see from the below screenshot once the code is entered the module shows a checkmark (verification checked via AJAX) and the captcha popup simply disappears allowing you to then submit the form:
