The S5 Menu system gives you the option to choose between the jQuery or the S5 Effects scripts to power your site menus. The demo here is all running the jQuery menu system. You can easily switch to the S5 Effects library via your template parameters area in Joomla (extensions > template manager > select the template and click edit)

The S5 jQuery menu functions just like the S5 No-MooMenu except it is powered by jQuery. To demo the menu just mouse over the top menu and you will notice the menu smoothly expand and fade in.

This month we've added in the ability to add images to the top menu:

Simply open up your menu item and add select your image to be shown. The image is pulled from the stories folder so be sure to upload your images you want on the main menu to the images/stories folder:

Menu screenshot:

5 Options:

- Drop In Effect ([click here for an example](#))
- Fade In Effect ([click here for an example](#))
- Scroll In Effect ([click here for an example](#))
- Standard Suckerfish Effect ([click here for an example](#))
- No Menu - Removes Menu Entirely
