---

### New Page 1

Easily create your own custom background! Here's how it works:

1. Create your own custom background
2. Name the image s5\_background.jpg
3. Upload the file to templates/sportopolis/images/ and over-write the existing one
4. In the template configuration area select a background repeat color that will cover the areas of the screen that the background image does not cover.

On this demo the black, carbon image is the s5\_background.jpg image and grey is chosen for the repeat color as shown below

# How To Create a Custom Background

The image shows a Joomla! website template with a custom background image of Kobe Bryant. The page layout includes a top navigation bar with links like Home, 55 No-ModMenu, Features, Joomla! Stuff, Tutorial, Preset Styles, and Typography. The main content area is divided into several sections:

- Header:** "sportopolis June 2008 Template" and "488 x 55 Banner - Fully Customizable".
- Main Article:** "Kobe Bryant disappears down the stretch" with a sub-image of Kobe Bryant and a "Read more..." link.
- Recent NLE News:** "Husks still struggling" with a sub-image and a "Read more..." link.
- The World of Boxing:** "Hatten comes in second" with a sub-image and a "Read more..." link.
- Giants counting on a healthier Jacobs:** A text-based article snippet.
- Footer:** "Our Most Popular Articles", "NBA Finals and Pre-Season Football", and "This Week's NBA Highlights".

Overlaid on the image is the text "images/s5 background.jpg" in a large, white, sans-serif font.
