

Templates and Extensions Updated for PHP 5.3.0

{social_icons}

Several months ago PHP 5.3.0 was released. Most servers are still running PHP 5.2.x or less but some cases of 5.3.0 have started appearing in our forum boards, and like most new versions of software compability issues have come up. We are happy to announce that all Shape 5 Joomla 1.5 products, templates and extensions, are now updated to work with PHP 5.3.0.

If you are not running 5.3.0 on your server, don't worry, there's no need to update. If you are not sure if you are running 5.3.0 most likely you are not. If your template or extension is an older verion and is effect by 5.3.0 you will see messages about a deprecated function `ereg()` on your site. Note - these messsages will not appear in our updated files. If you run into these errors please post a forum support thread under the forum board pertaining to the product you are using.
