

S5 Media Player V2 Security Update

We have recently discovered a security vulnerability in our S5 Media Player V2 plugin that could potentially allow someone to download unintended files, including system files, through it's download feature which is intended for mp3 files. This affects all verions 2.2 and lower. The latest 2.3 version has been updated to fix this issue and can be downloaded at the link below. We do not use this plugin very often and is included in our Game World and Risen Hope site shapers; which have also been updated to the latest versions. If you are unsure if you use this plugin simply search for "S5 Media Player" in Joomla's Plugin Manager to verify.
